

Building libraries for iOS Going native

Alexander Dodatko
2014

The standard library saves
programmers from having
to reinvent the wheel.

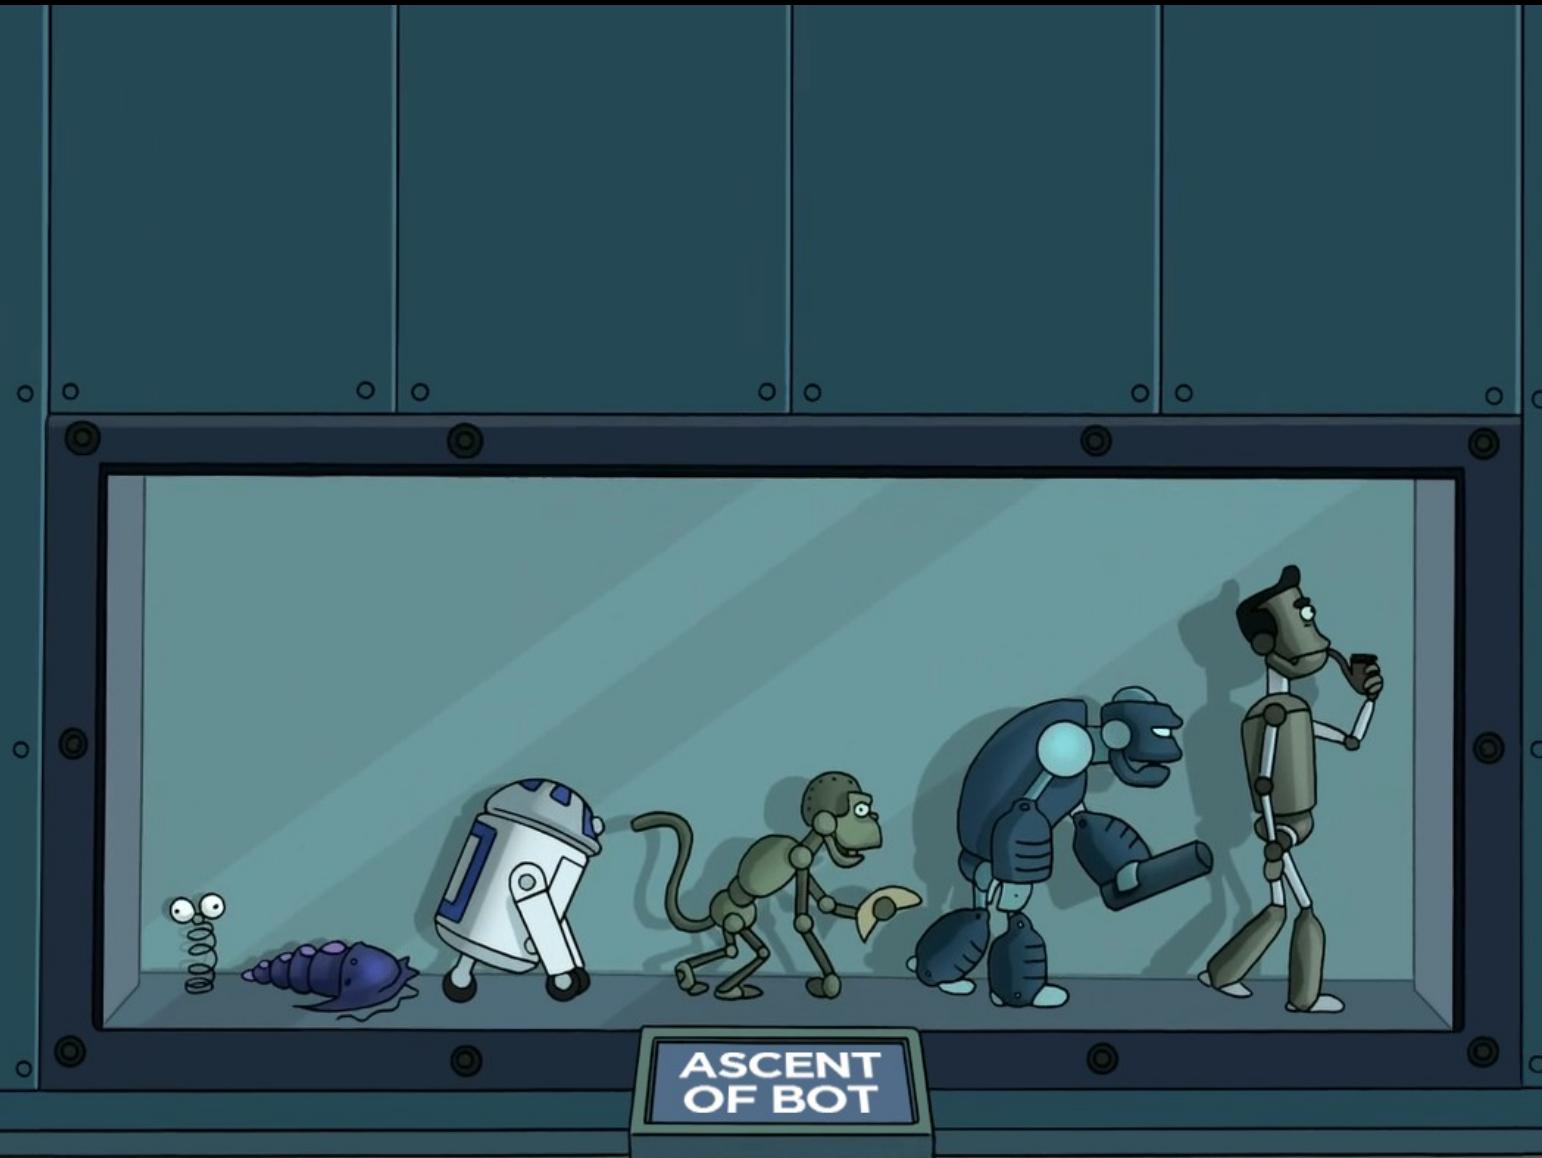

Bjarne Stroustrup

<http://bit.ly/1iqZ3JO>

The ONLY VALID MEASUREMENT OF Code QUALITY: WTFs/minute

Code Reuse is Important

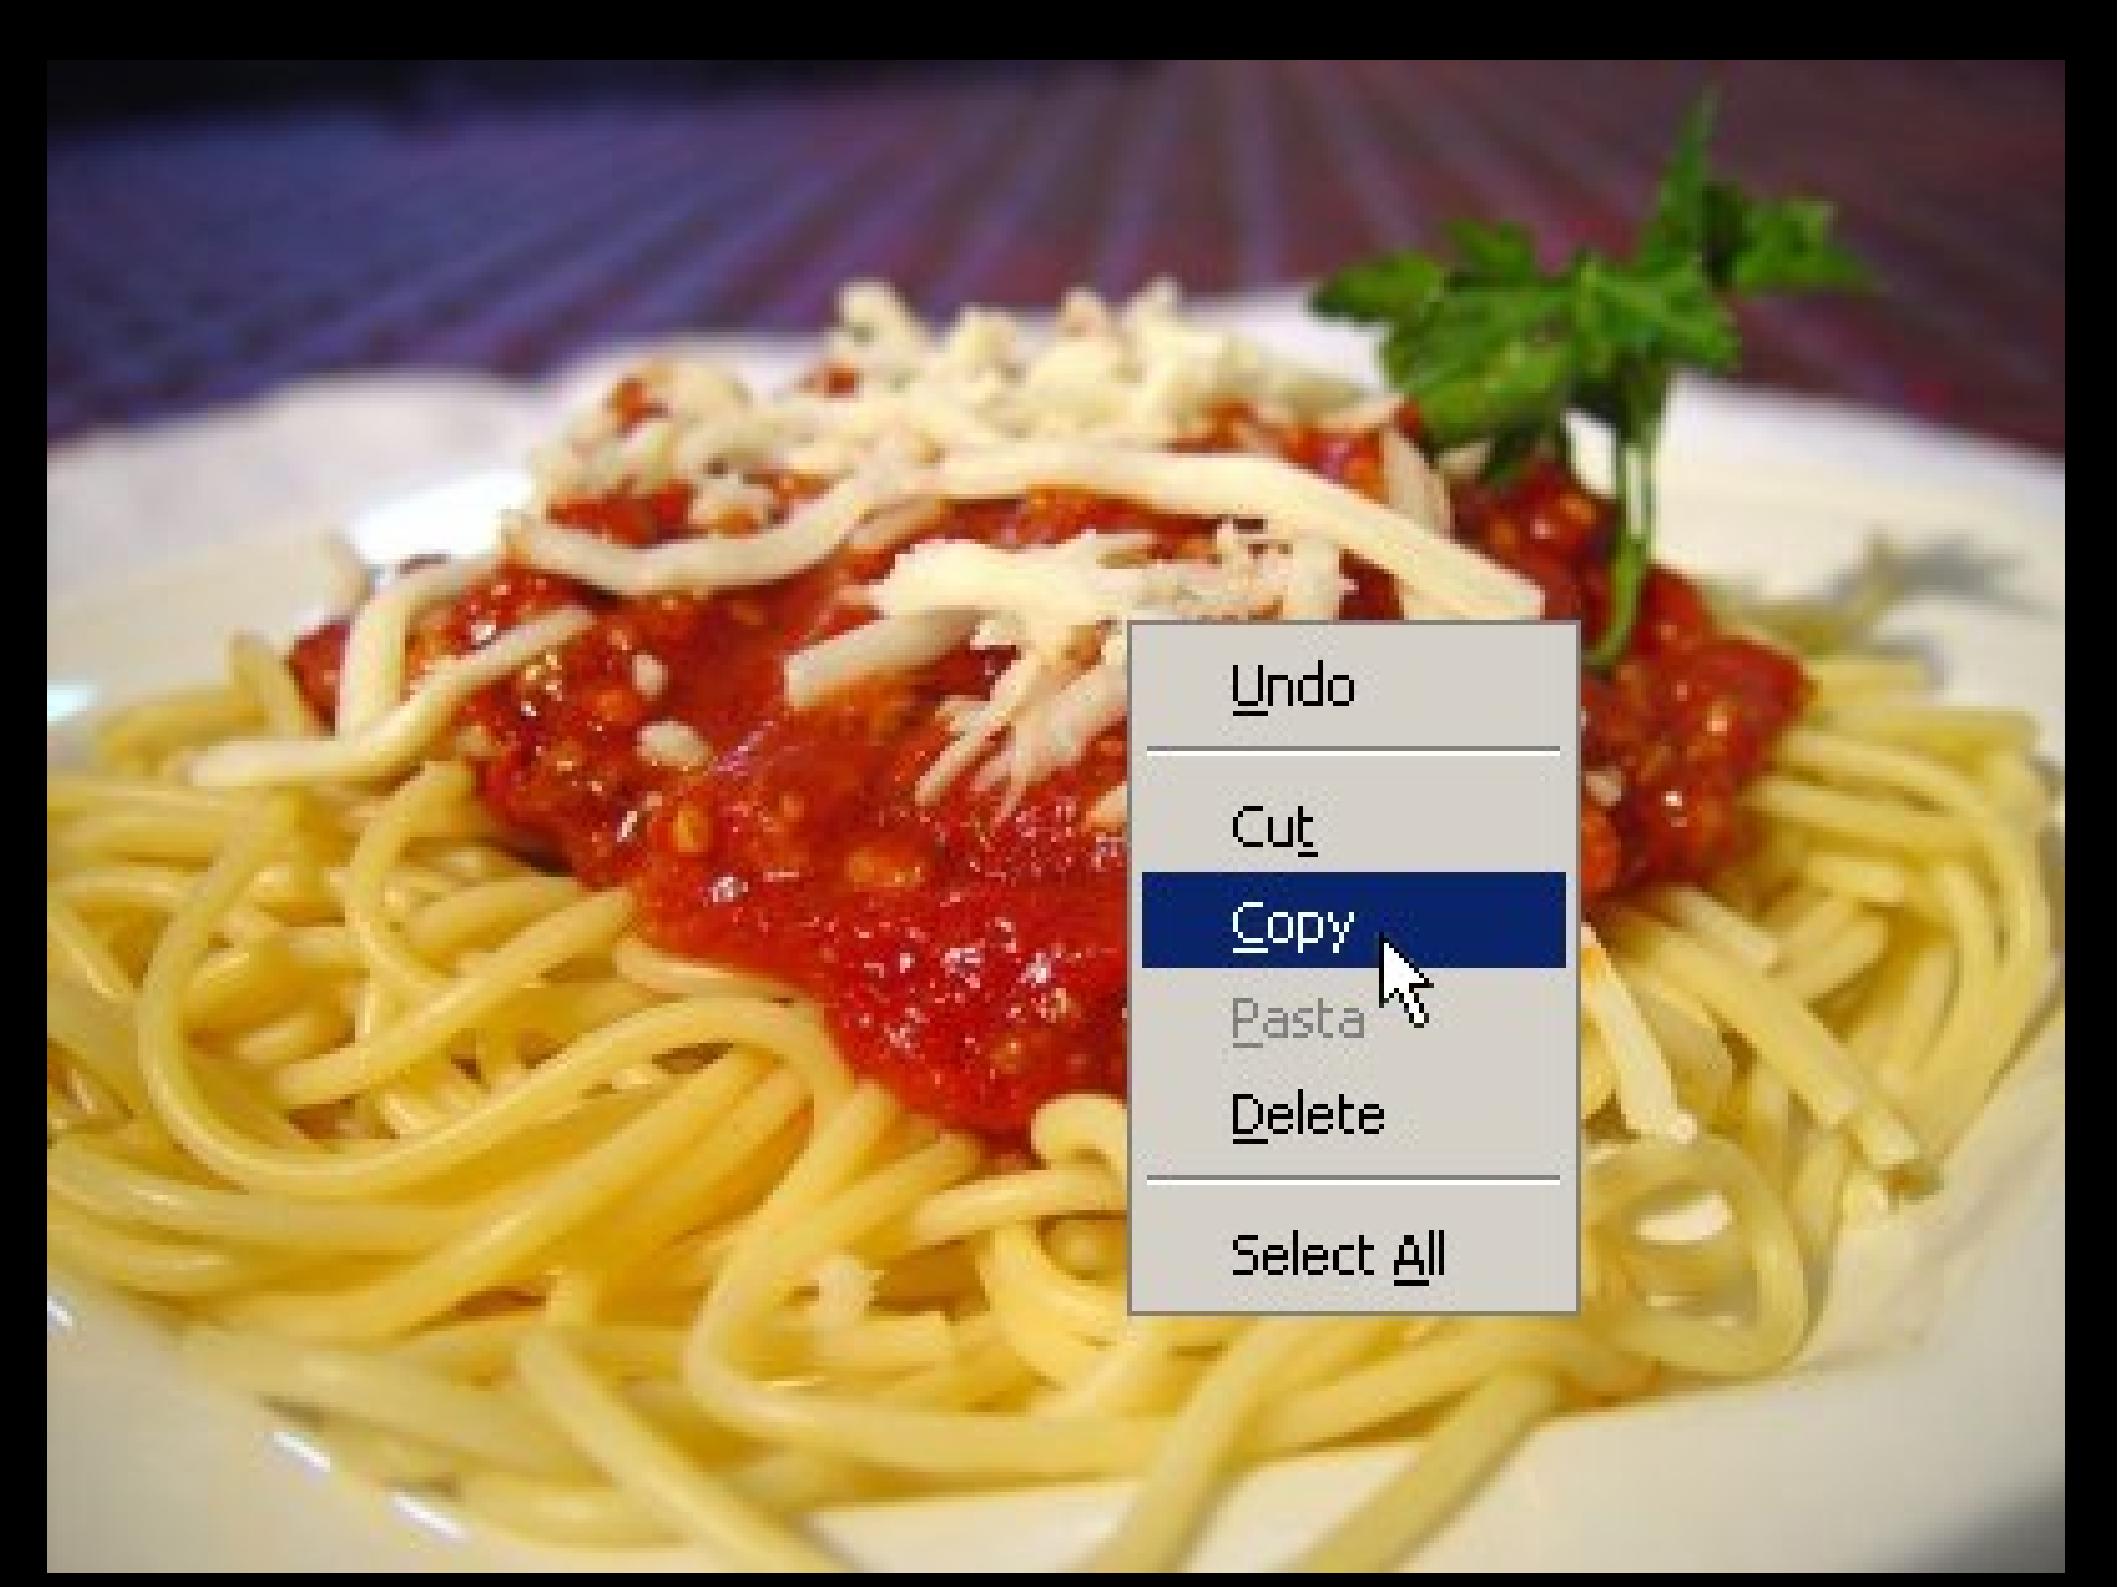

March 2008

<http://engt.co/1pOLKH9>

The fastest code is the code
that reaches the market first

Nobody Cares

A close-up photograph of a plate of spaghetti. The pasta is coated in a vibrant red tomato sauce and topped with melted white cheese. A small sprig of green parsley is visible in the background. A context menu is overlaid on the image, centered on the spaghetti. The menu has a light gray background with black text and a dark blue selection bar. The options are: Undo, Cut, Copy, Paste, Delete, and Select All. The 'Copy' option is highlighted with a dark blue background and a white outline. A cursor arrow points to the right edge of the 'Paste' option.

Going Native

CocoaPods

--no-integrate

The screenshot shows the Xcode interface with the project 'ListItemsBrowserDemo' selected. The top bar displays the project name and target 'iPhone Retina (4-inch)'. The toolbar below has various icons for file operations. The left sidebar lists project files:

- ListItemsBrowserDemo** (selected, blue icon)
3 targets, iOS SDK 7.0
- lib**
 - SitecoreItemsBrowser.framework**
 - SitecoreMobileSDK.framework**
 - SCItemsBrowser.xcodeproj** (highlighted with a red border)
3 targets, iOS SDK 7.0
- ListItemsBrowserDemo**
- ListItemsBrowserDemoTests**
- Frameworks**
- Products**
- ListItemsBrowserDemo copy-Info.plist**

The right side of the screen shows the code editor with partial code snippets:

```
#imp  
1  
2  
3  
4  
5  
6  
7  
8  
9  
10

Incapsulation

\$(inherited)

/Applications/Xcode.app/Contents/Developer/Toolchains/XcodeDefault.xctoolchain/... non-recursive

.

./frameworks non-recursive

./frameworks/SitecoreMobileSDK.framework/Headers recursive

+ -

A screenshot of a file search interface. The search results list includes the current directory, the Xcode toolchain path, and the ./frameworks directory. The ./frameworks entry is currently selected, highlighted with a blue background. A context menu is open over this selection, showing two options: "non-recursive" (which is checked) and "recursive". The entire context menu area is enclosed in a red rectangular border.

```
#import <AFNetworking/AFNetworking.h>
```

```
#import <Foundation/Foundation.h>
```

Static Framework for iOS

	libOCMock.a

	OCMock
▼	Resources
	Info.plist

Drag & Drop

Framework Search Path is updated by Xcode

```
<plist version="1.0">
<dict>
    <key>CFBundleDevelopmentRegion</key>
    <string>English</string>
    <key>CFBundleIdentifier</key>
    <string>org.ocmock</string>
    <key>CFBundleInfoDictionaryVersion</key>
    <string>6.0</string>
    <key>CFBundlePackageType</key>
    <string>FMWK</string>
    <key>CFBundleSignature</key>
    <string>????</string>
    <key>CFBundleVersion</key>
    <string>2.2.3</string>
</dict>
</plist>
```

Frameworks Reduce Compilation Time

CocoaPods

CocoaPods Makes you Care about Versioning

and Unit Testing

For Distribution

For You

For End Users

Library Dependencies and Linker

```
ld: duplicate symbol _main in /Users/samuelleeuwenburg/Library/Developer/Xcode/D  
SDLStackOverflowTest1-awqtenipezizyreqnvxupfbheywd/Build/Intermediates/SDLStack  
Debug/SDLStackOverflowTest1.build/Objects-normal/x86_64/SDLMain.o and /Users/sa  
Library/Developer/Xcode/DerivedData/SDLStackOverflowTest1-awqtenipezizyreqnvxup  
Intermediates/SDLStackOverflowTest1.build/Debug/SDLStackOverflowTest1.build/Obj  
main.o for architecture x86_64  
clang: error: linker command failed with exit code 1 (use -v to see invocation)
```

Duplicate symbol _main in /Users/samuelleeuwenburg/Library/Developer/Xcode/DerivedData/SDLStackO

! Linker command failed with exit code 1 (use -v to see invocation)

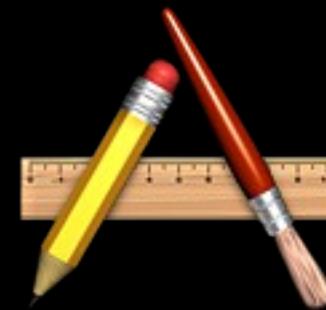

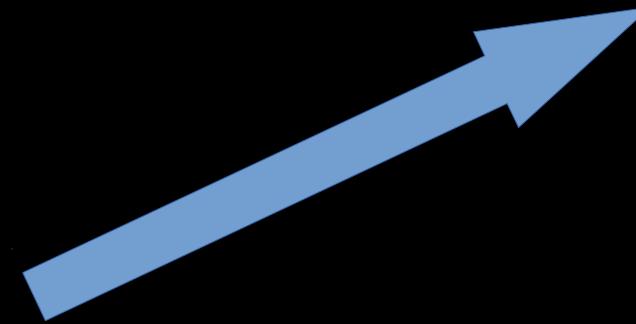

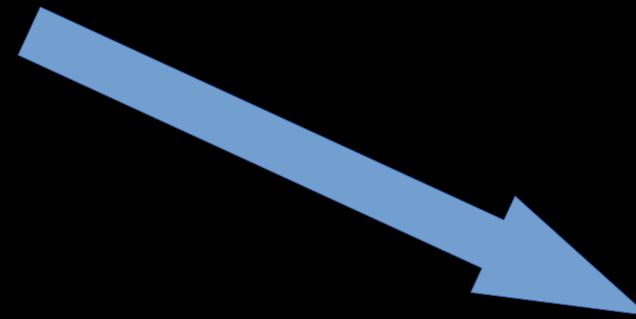

Activity Log Complete 9/26/12 3:41 PM

1 error, 1 warning

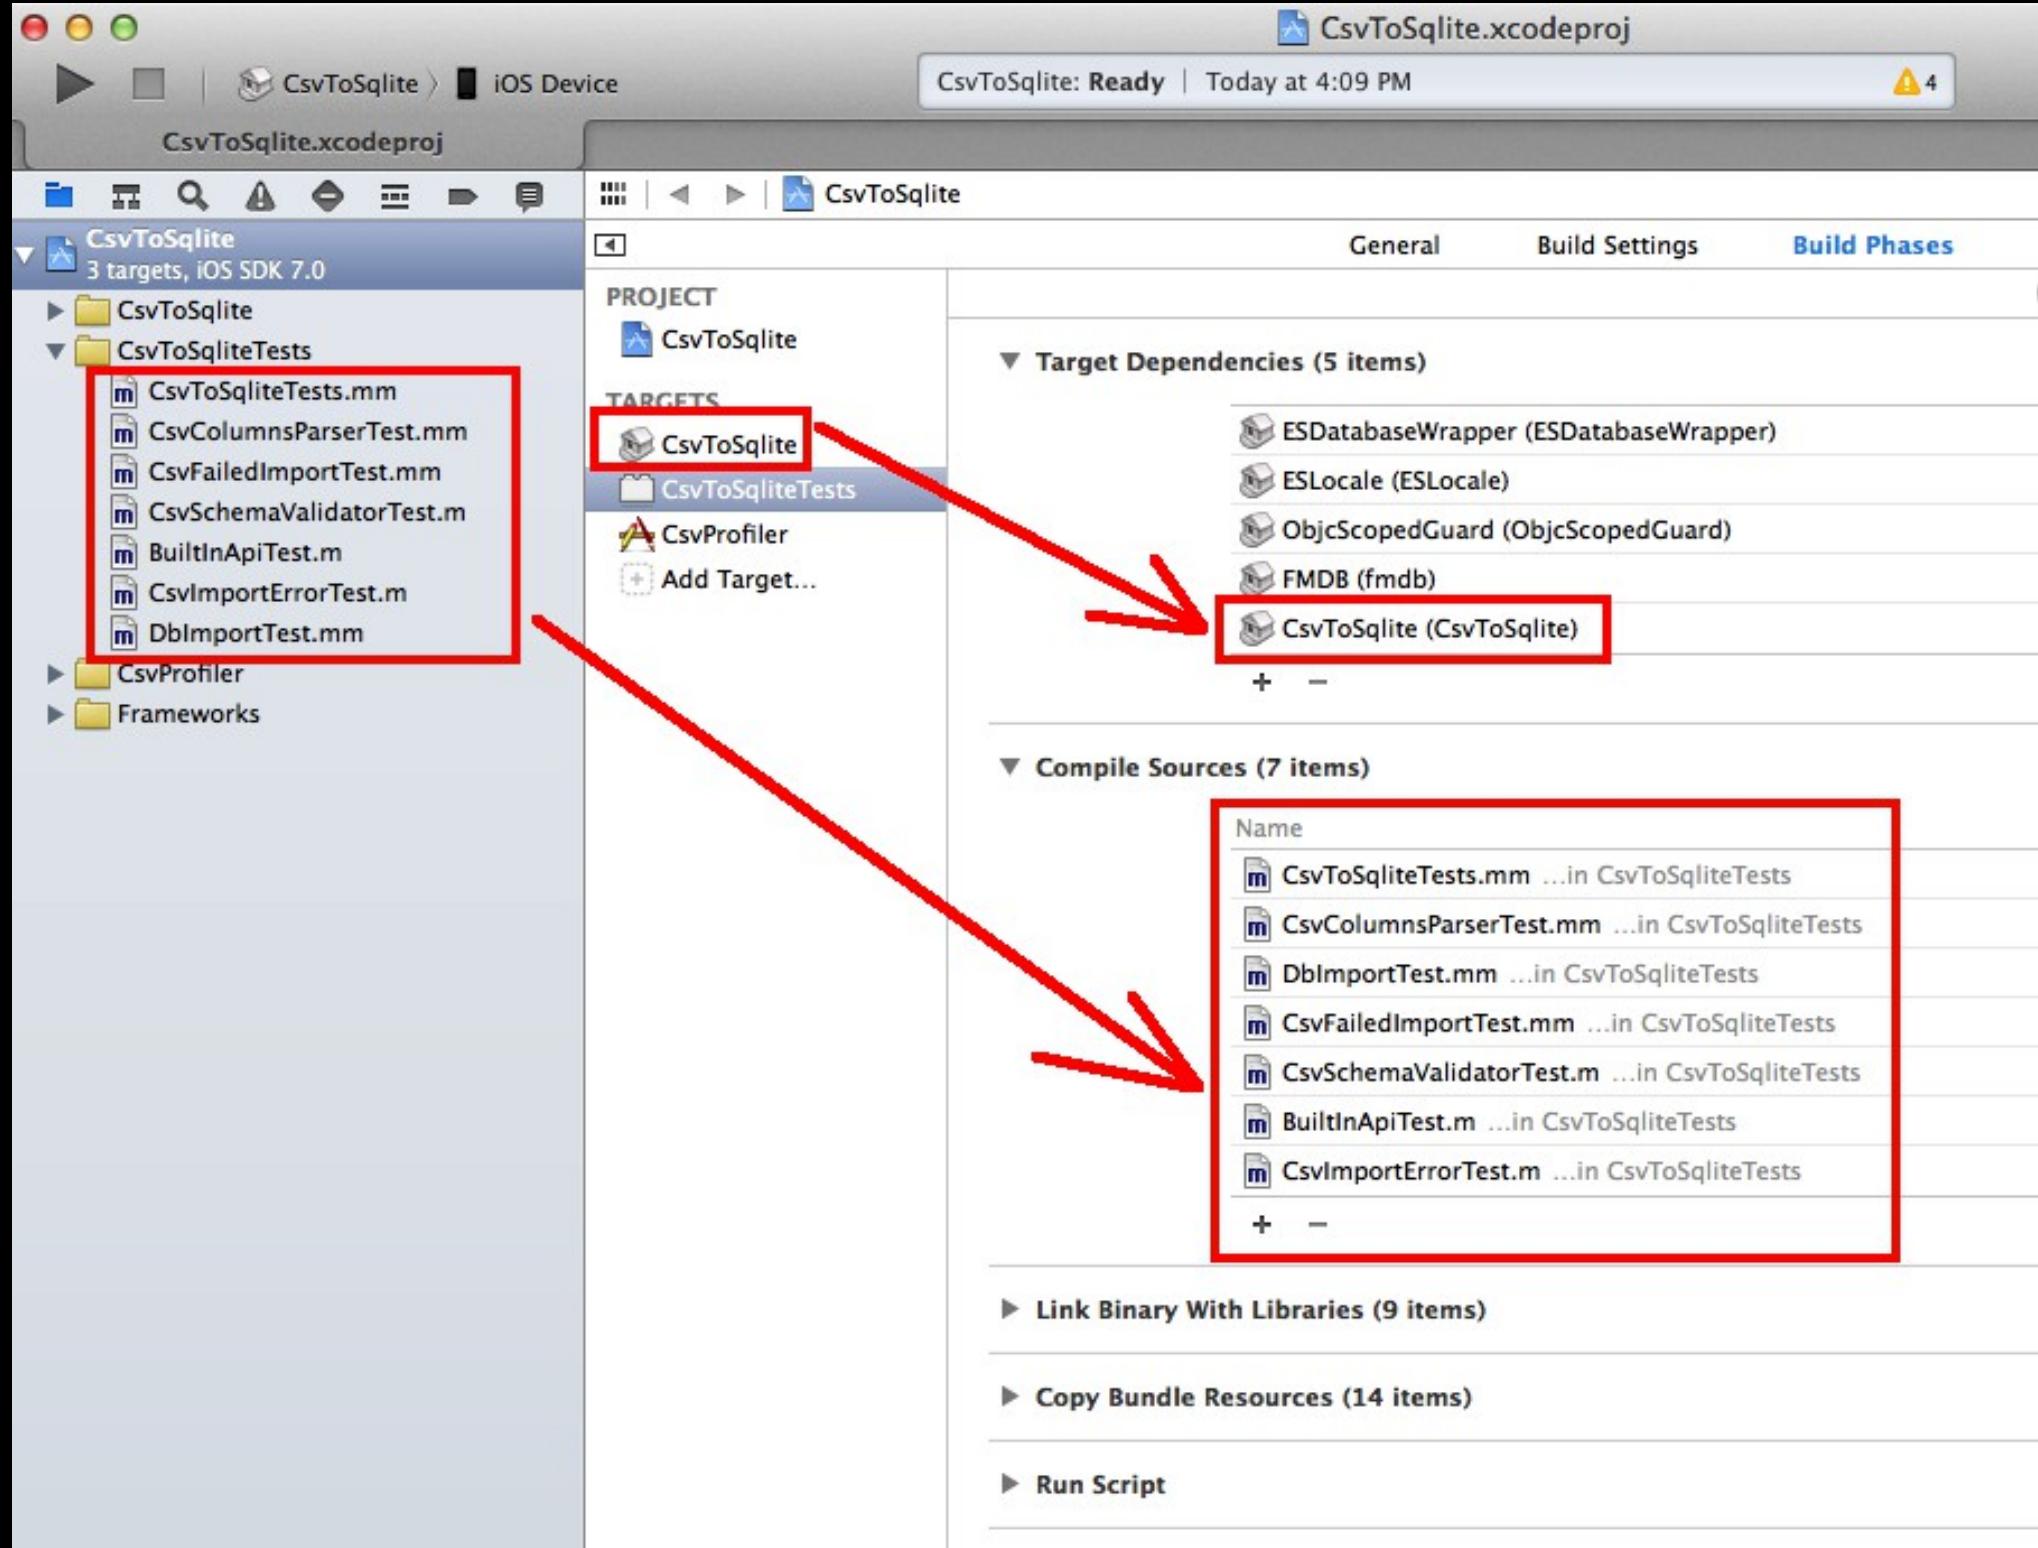

Never Link Libraries into Other Libraries

Same Approach for Unit Tests

All Testable Code Should be in libraries

Use Precompiled Headers

```
// Pure C headers go here
#include <math.h>

#ifndef __cplusplus
    // Pure C++ headers go here
    #include <vector>
#endif

#ifndef __OBJC__
    // Objective-C headers go here
    #import <Foundation/Foundation.h>

#ifndef __cplusplus
    #import "MyObjectiveCppClass.h"
#endif
#endif
```

But I do not Need C++

Print Message for Low Level Error

```
NSDictionary* errorMessages;  
NSLog( @"%@", errorMessages[ @( errorCode ) ] );
```

C++ ==> No Boxing

```
std::map< NSInteger, NSString* > errorMessages;  
NSLog( @"%@", errorMessages[ errorCode ] );
```

Scoped Guard

```
void bad(const char* p)
{
    FILE* fh = fopen(p,"r"); // acquire

    // use f
    if ( someCondition )
    {
        // Oops! File handle leaks
        return;
    }

    fclose( fh ); // release
}
```

```
void good(const char* p)
{
    FILE* fh = fopen(p,"r"); // acquire

    // the block to perform cleanup actions
    GuardCallbackBlock releaseBlock_ = ^void( void )
    {
        fclose( fh );
    };

    // creating a guard
    ObjcScopedGuard guard( releaseBlock_ );

    if ( someCondition )
    {
        // Now the scoped guard will release the resource
        return;
    }
}
```

Exception-Safe Resource Deallocation

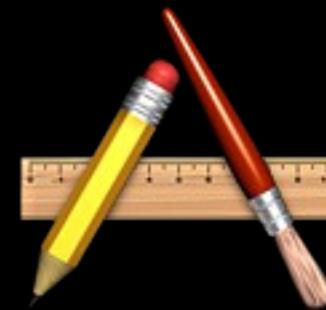

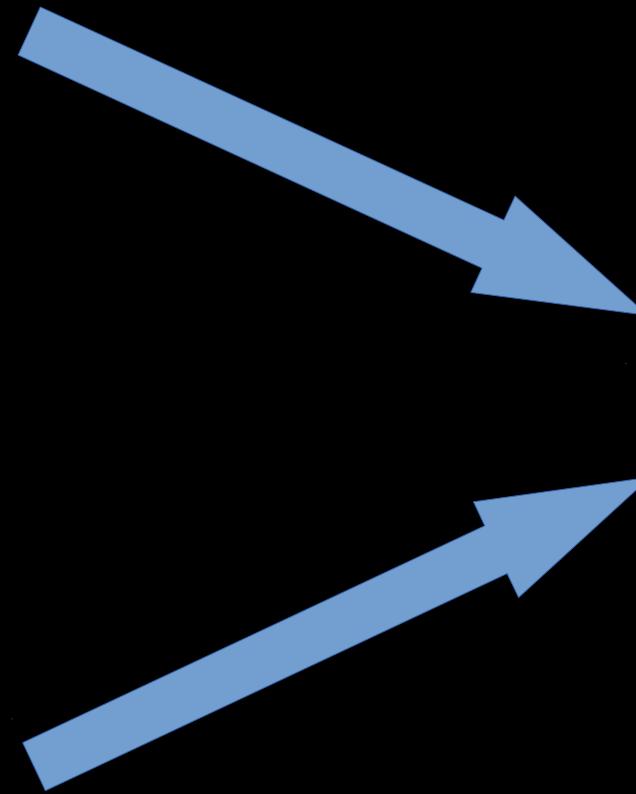

Vector as a Scoped Guard Memory

malloc()

std::vector<unsigned char>

Let's Recap

```
#import <AFNetworking/AFNetworking.h>
```

For Public Headers

For Development
and Unit Testing

For Distribution

Native Rulezzz
